

Solve two-step equations

1 Use the bar models to help you solve the equations.

a)

20			
y	y	y	8

 $3y + 8 = 20$

$y =$ 4

b)

2			
y	y	y	8

 $3y + 8 = 2$

$y =$ -2

Which bar model do you prefer? Talk about it with a partner.

2 Dexter is solving an equation.

$$\begin{aligned} 2n + 9 &= 5 \\ 2n &= 9 - 5 \\ 2n &= 4 \\ n &= 2 \end{aligned}$$

$$\begin{aligned} 2n + 9 &= 5 \\ 2n &= 5 - 9 \\ 2n &= -4 \\ n &= -2 \end{aligned}$$

What mistake has Dexter made?

Write the correct solution next to Dexter's workings.

3 Solve the equations.

a) $4a + 20 = 8$

$a =$ -3

d) $15 + 7b = 8$

$b =$ -1

b) $3c + 23 = 8$

$c =$ -5

e) $0 = 8 + 2d$

$d =$ -4

c) $9y + 10 = -8$

$y =$ -2

f) $2h + 12 = -5$

$h =$ -8.5

4 Solve the equations.

a) $2y - 4 = 6$

$y =$ 5

c) $2y - 6 = 4$

$y =$ 5

b) $2y - 4 = -6$

$y =$ -1

d) $2y - 6 = -4$

$y =$ 1

Discuss your answers with a partner.

5 Solve the equations.

a) $-5m + 40 = 10$

$m = \boxed{6}$

c) $3 = 15 - 10k$

$k = \boxed{1.2}$

b) $1 - 3g = 10$

$g = \boxed{-3}$

d) $13 = 7 - 4p$

$p = \boxed{-1.5}$

6 Solve the equations.

a) $\frac{g}{2} + 7 = 12$

$g = \boxed{10}$

d) $12 = \frac{g}{2} - 7$

$g = \boxed{38}$

b) $\frac{g}{2} + 12 = 7$

$g = \boxed{-10}$

e) $7 = \frac{g}{2} - 12$

$g = \boxed{38}$

c) $12 + \frac{g}{2} = 7$

$g = \boxed{-10}$

f) $12 - \frac{g}{2} = 7$

$g = \boxed{10}$

7 Solve the equations.

a) $\frac{x}{5} + 1 = 3$

$x = \boxed{10}$

b) $\frac{x+1}{5} = 3$

$x = \boxed{14}$

What is the same and what is different about the two equations?

8 The value of x in this equation is 7

Work out possible missing numbers for each equation.

e.g. $\boxed{-2}x + \boxed{15} = 1$

$\boxed{2}x - \boxed{13} = 1$

How many different answers can you find?

Various answers.

9 The diagram shows a square with sides $8 - 3p$ cm.

The perimeter of the square is 74 cm.

Calculate the value of p .

$p = \boxed{-3.5}$
